

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

LISTING OF CLAIMS:

Claim 1 (Canceled)

2. (Currently Amended) The system of ~~claim 1~~ claim 31, wherein the different IP enabled device ~~comprises~~ devices includes an IP telephone, and the access provider network further comprises a telephone network gateway, ~~and the e-center further comprises a call agent for coordinating operations of the IP telephone and telephone network gateway.~~

3. (Currently Amended) The system of ~~claim 1~~ claim 31, wherein the different IP enabled device ~~comprises~~ devices include a personal computer.

4. (Currently Amended) The system of ~~claim 1~~ claim 31, wherein the different IP enabled device ~~comprises~~ devices include an IP enabled appliance.

5. (Currently amended) The system of ~~claim 1~~ claim 31, wherein the ~~e-center~~ access provider network further comprises a user network management system.

6. (Currently amended) The system of ~~claim 1~~ claim 31, wherein the ~~e-center~~ access provider network further comprises a streaming media server.

7. (Currently amended) The system of ~~claim 1~~claim 31, wherein the access provider network further comprises a broadband access interface.

8. (Currently amended) The system of ~~claim 1~~claim 31, wherein the plurality of different IP enabled device resides~~devices reside~~ on a local area network (LAN) in communication with the ~~network~~ access device.

9. (Currently amended) The system of claim 8, wherein the ~~network~~ access device utilizes Network Address Translation (NAT) protocol to provide the second IP address.

10. (Currently amended) The system of ~~claim 1~~claim 31, wherein the ~~host configuration server~~ access provider network further comprises a Dynamic Host Configuration Protocol (DHCP) server.

11. (Currently amended) The system of ~~claim 1~~claim 31, wherein the ~~host configuration server~~ access provider network further comprises a Remote Authentication Dial In User Service (RADIUS) server.

Claims 12-13 (Canceled)

14. (Currently amended) The method of ~~claim 13~~claim 27, wherein the ~~generating~~ step of assigning the second IP address is accomplished using Network Address Translation (NAT) protocol.

Claims 15-26 (Canceled)

27. (New) A method for providing Internet Protocol (IP) services from different Internet Service Providers (ISPs) to a plurality of different IP enabled devices via an access provider network, the method comprising the steps of:

connecting said plurality of different IP enabled devices to said access provider network via an access device;

assigning a first IP address from said access provider network to said access device;

establishing, by said access device, a service session with one of said plurality of different ISPs by assigning a second IP address from said one of said plurality of different ISPs to said access device;

receiving, by said access device, IP traffic from one of said different IP enabled devices;

determining whether a destination IP address associated with said IP traffic is associated with said access provider network;

forwarding, if said destination IP address is not associated with said access provider network, said IP traffic to said one of said plurality of different ISPs using said second IP address as a source address of said IP traffic; and

otherwise, if said destination IP address is associated with said access provider network, forwarding said IP traffic to said access provider network using said first IP address as said source address of said IP traffic.

28. (New) The method of claim 27, further comprising the step of:
mapping said service session to said one of said plurality of different IP enabled devices.

29. (New) The method of claim 27, further comprising the steps of:
receiving, by said access device, additional IP traffic from one of said different ISPs;

determining, by said access device, which one of said plurality of different IP enabled devices is an intended recipient of said additional IP traffic; and

forwarding said additional IP traffic to said one of said plurality of different IP enabled devices.

30. (New) The method of claim 29, wherein said step of determining, by said access device, which one of said plurality of different IP enabled devices is an intended recipient of said additional IP traffic further comprises the step of:

consulting a mapping table which maps said one of said plurality of different IP enabled devices to said one of said different ISPs based on previously exchanged IP traffic.

31. (New) A system for providing Internet Protocol (IP) services from different Internet Service Providers (ISPs) to a plurality of different IP enabled devices via an access provider network, the system comprising:

a plurality of different IP enabled devices;

an access provider network connected to said different ISPs; and

an access device which connects said different IP enabled devices to said access provider network;

wherein said access provider network assigns a first IP address to said access device;

wherein said access device establishes a service session with one of said plurality of different ISPs by assigning a second IP address from said one of said plurality of different ISPs to said access device;

wherein when said access device receives IP traffic from one of said different IP enabled devices, said access device determines whether a destination IP address associated with said IP traffic is associated with said access provider network;

wherein said access device forwards, if said destination IP address is not associated with said access provider network, said IP traffic to said one of said plurality of different ISPs using said second IP address as a source address of said IP traffic; and

wherein said access device otherwise, if said destination IP address is associated with said access provider network, forwards said IP traffic to said access provider network using said first IP address as said source address of said IP traffic.
